

Smallest Positive Missing

Difficulty: Medium | Accuracy: 25.13% | Submissions: 483K+ | Points: 4

You are given an integer array `arr[]`. Your task is to find the smallest positive number missing from the array.

Note: Positive number starts from 1. The array can have negative integers too.

Examples

Input: `arr[] = [2, -3, 4, 1, 1, 7]`

Output: 3

Explanation: Smallest positive missing number is 3.

Input: `arr[] = [5, 3, 2, 5, 1]`

Output: 4

Explanation: Smallest positive missing number is 4.

Input: `arr[] = [-8, 0, -1, -4, -3]`

Output: 1

Explanation: Smallest positive missing number is 1.

Constraints

$1 \leq \text{arr.size()} \leq 10^5$

$-10^6 \leq \text{arr}[i] \leq 10^6$
